SUMMARY

Machine Learning Engineer with expertise in deploying real-time optimized ML models. Skilled in computer vision, PyTorch, YOLO, and TensorFlow, with a strong foundation in systems design and cloud platforms and Gen AI.

EXPERIENCE

Machine Learning Engineer May 2024 – May 2025
California State Polytechnic University Pomona, CA

- Built and optimized real-time object detection pipelines using PyTorch and TensorRT on NVIDIA Jetson AGX Orin, improving detection accuracy by 25% and reducing latency by 35%.
- Deployed YOLOv8 with ROS2 for real-time object detection, improving autonomous navigation using multi-modal sensor input.
- Reduced inference latency by 40% through model quantization/pruning using PyTorch Lightning and MLflow, with iterative tuning from field data.

EDUCATION

Master of Science in Computer Science, California State Polytechnic University, Pomona May 2025
Relevant Coursework: Algorithms, Software Engineering, Machine Learning, Autonomous Vehicle.

B.Tech Computer Science and Engineering, Solapur University, India July 2022
Relevant Coursework: Data Structures and Algorithms, Database Systems, Operating Systems, Computer Networks.

PROJECTS

Real-Time Chat Application | MongoDB, Express.js, React, Node.js January 2024

- Built a responsive chat platform using MongoDB, Express.js, React, Node.js, and Socket.io with JWT-based authentication and global state via Zustand.
- Deployed real-time messaging infrastructure with WebSocket handling and clean UI using Tailwind CSS.

Stock Price Prediction with XGBoost | TensorFlow, Python, JavaScript April 2022

- Developed a time-series forecasting model with XGBoost, achieving 94% accuracy using advanced feature engineering (RSI, MACD, Bollinger Bands).
- Built a complete ML pipeline in Python with cross-validation and visualized trends using Matplotlib.

CERTIFICATION

Rapid Application Development with Large Language Models (LLMs)
NVIDIA Deep Learning Institute June 2025

- Gained hands-on experience building AI-powered applications using Hugging Face Transformers, Lang Chain, and vector databases.
- Developed and deployed LLM-based solutions for text generation, semantic search, and conversational agents.
- Applied prompt engineering and retrieval-augmented generation (RAG) techniques for real-world use cases.

SKILLS

Languages:	Java, JavaScript, Next.js, C#, Node.js, C++, Express.js, Python
Software Engineering:	System Design, REST APIs, OOP
ML & AI:	PyTorch, YOLOv8, OpenCV, TensorRT, Keras, MLflow, TensorFlow
Data Tools:	Pandas, NumPy, Matplotlib
DevOps & Infra:	Docker, Git, MLflow, PyTorch Lightning, ROS2
Cloud Platforms:	AWS, Google Cloud Platform, Microsoft Azure
Databases:	MySQL, MongoDB, PostgreSQL
